DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I, claims 10-13, drawn to a composition comprising tissue repair, are for example classified in class 424, subclass 422.

Group II, claims 14-15, drawn to a method of promoting osteogenic cell growth, are for example classified in class 523, subclass 115.

Claims 10 and 11 link(s) invention group I. Claim 14 link group II. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claim(s), 10 and 11 for group I or claim 14 for group II, respectively. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Art Unit: 1653

Applicant needs to elect group I or II and to elect one patentably distinct and independent peptide from among SEQ ID NO: 1, 2, 3, 4, 5, 6, and 7, class 514, subclass 2 to be examined with one of group I or group II as elected.

The peptide sequences recited in the claims are distinct and different on the basis of physical, chemical and biological properties even when the application would place all as tissue repair compositions, they are all of different structure and function.

The search of the patent and technical literature for one of the peptides would not have resulted in a complete search for any one of the peptide combinations.

The inventions are distinct, each from the other for the following reasons:

Inventions in group I and group II are distinct and/or independent, one from the other because the composition comprising tissue repair does not require the method to promote osteogenic cell growth.

Because these inventions are distinct for the reasons given above and since they have acquired a separate status in the art as shown by their different classification and/or divergent subject matter, and/or are separately and independently searched, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirements be traversed (37 CFR 1.143).

a. A telephone call was made to Kathleen Hall on 9/16/02 regarding this restriction requirement, an election was not made at this time.
